BLUEBIRD FIBER

Keep Your Critical Infrastructure Close

Bluebird Grand Rapids Data Center | Grand Rapids, Michigan

3950 Sparks Dr. SE, Suite 102
Grand Rapids, MI 49546

A hardware refresh can change more than the equipment you install. Higher cabinet power requirements and the need for hands-on access make where you place that equipment part of the decision.

Bluebird's Grand Rapids Data Center offers full-cabinet colocation with 20–25 kW power configurations and direct access to its owned Midwest fiber network. That lets you deploy higher-density equipment locally, where your IT team can reach it when needed, while maintaining connectivity to your other business locations.

Colocation Space

Full cabinets support 20–25 kW per cabinet, giving your team a defined power range for deployment planning.

Power Continuity

The facility has a single incoming utility feed, N+1 UPS redundancy and two 800 kW backup generators. A/B cabinet power is also available.

Regional Connectivity

Connect at speeds up to 100G and link your equipment to other business locations through Bluebird's network services.

Take a Tour

Walk through the cabinet space and review power infrastructure and connectivity options with Bluebird's team.
